Clean and capable interface that sports a well-thought layout, for optimal handling The app sports an uncluttered layout which offers all of its tools in a concentric manner, this way providing users with an inherent, logical workflow when processing images or videos. Furthermore, the fact that the adjacent side-panels can be toggled on demand, makes things even more efficient. In terms of file management, drag-and-dropping isn't supported and users will have to navigate to the corresponding, image or video directory. Remove watermarks from either images or videos, thanks to competent editing tools Having two main sections, one for erasing watermarks from images and one from videos, switching between the two is effortless. In terms of actual editing features, all that users need to do is perform a selection on the watermark area in the image and the app will automatically erase it. Nevertheless, for those who wish to perform that process manually, there are also dedicated erasing tool-tips, which feature adjustable width, but not hardness or opacity. Decent watermark removal software that provides accessibility and manages to break down the process to the masses If you are in need of an accessible app for tackling watermarks present in images or videos, this program could solve your troubles in an easy, effortless manner. Boasting several accessible editing features, it offers both an efficient handling, as well as quite good processing results. Field of the Invention The present invention is related to a display device, and more particularly, to a display device comprising a pull-up circuit module and a sensing circuit module. 2. Description of the Prior Art Organic light emitting diode (OLED) displays are usually provided with a plurality of pixel units having at least one red sub-pixel, a blue sub-pixel, and a green sub-pixel, wherein the colors of the sub-pixels can be distinguished by controlling the organic light emitting diodes in the sub-pixels. Therefore, the organic light emitting diode (OLED) displays are applicable to the display panel of the display device, such as mobile phone, television, and monitor. As for the mobile phone, the display device usually comprises a display panel and a backlight module for providing light to the display panel. The backlight module comprises a light source, such as a light-emitting diode (LED), a CCFL (cold cathode fluorescent lamp), or a CCFL (cold cathode fluorescent lamp) or a light source module having a light guide plate to allow the light emitted from the light source to be evenly guided to a display surface of the display panel. When the backlight module emits light to the display panel, the display panel and the backlight module are coupled together using a tray adhesively bonded to the display panel. In the current way, the display panel and the backlight module
